

DOUGH (DOU) WHITEPAPER

By Cypher Soze

Executive summary

The DOU token is a store of value, medium of exchange and a private and non-traceable token. It is secured fully by the Ethereum virtual machine and can never be edited, amended or deleted.

The DOU was born out of the need for a token which is not owned by a company or corporation, there is no founder and no ultimate owner. The owner of the DOU token is the person who has possession of it in their wallet.

No red tape, no government barriers, truly free trade, whether you are rich or poor, black or white, religious or non religious, what ever your political views nothing matters. If you have the DOU in your wallet it is yours and nobody can take it off you. **You are the bank**

There are only 10,000,000 DOU tokens available to buy ever. There will never be any more

Why the DOU

The world of cryptocurrencies has become rife with companies and large corporations owning the space and once again making billions of dollars off the back of poor people. This goes completely against the vision of Satoshi Nakamoto and the vision and long term goals of the Cypherpunks. The DOU is here to revive this vision for whom ever wishes to keep their privacy and not discuss their financial matters on open forums. DOU is a private token which you own and control 100%

If I want to purchase a camel from Iran I should be able to? If I want to sell a horse to a trader in Kazakhstan I should be able to. I should not have to justify to the bank or anyone else for that matter why I am buying the camel from Iran and why I am selling the horse to someone in Kazakhstan and whom I am selling it to

Is there an ICO

There has not been and nor will be any ICO for The DOU, ICOs again have taken form for big corporations to raise millions of dollars off the back of poor people and then not deliver anything and rob the poorer people of their wealth while the whales and sharks get richer. The DOU token is the opposite. There is no multimillion dollar ICO nor is there a multimillion dollar marketing campaign it is a token that will be freely listed on etherdelta and the market will determine the price. It will be distributed amongst a selection of active traders on <https://etherdelta.com> to sell and buy at will which will create the liquidity required.

How to Buy DOU

There is only one place to purchase DOU tokens, the safest and most private exchange in the world <https://etherdelta.com>

<https://etherdelta.com> is a decentralised exchange which means it is hosted on the Ethereum virtual machine (EVM) therefore it cannot be shut down or hacked nor it can be arrested or taken to court or put in jail. Assets on the EVM cannot be frozen or confiscated therefore the person who has the token in their possession is in full control. The only possible scenario of the EVM shutting down is total nuclear collapse of the entire global internet, i.e. zero computers, zero internet and zero mobile data.

There are no KYC/AML requirements or any other identification requirements to purchase The DOU token off <https://etherdelta.com> therefore it is 100% private and 100% secure. There are zero restrictions anyone with internet access can purchase the DOU token and then resell it on to the <https://etherdelta.com> exchange

How much does the token cost

DOU is a true free market token, the price is determined by supply and demand on the exchange <https://etherdelta.com>

At any given time 24 hours a day 7 days a week anyone can buy or sell their DOU tokens in exchange for ETH on <https://etherdelta.com>
